Getting Rid Of The “Invalid Java Version” Popup In Pterodactyl

Simple config line.

nano /var/www/pterodactyl/resources/scripts/components/server/features/JavaVersionModalFeature.tsx

Delete all const MATCH_ERRORS and enter whatever for the last line and put a comma, like the below for an example.

```
const MATCH_ERRORS = [
    'Jasmine Is Cool',
];
```

Save, rebuild panel using ptero's community "build the panel assets" doc.

https://pterodactyl.io/community/customization/panel.html
